It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                44913

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

                                                                                                                                                                                                requests: clonerequest@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk clone on Apr 22, 2000 this sequence version replaced gi:7452953. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: em: EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 was finished as follows unless otherwise noted; all regions were covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequenced with an alternate chemistry or attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mis subclone; and the assembly was confirmed by restriction digest. RPI1-80K6 is from the library details see

**NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Research, 320 Charles Street, Cambridge, MA 02141, USA On May 13, 2001 this sequence version replaced gi:11968323. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Meldrim, J., Meneus, L., Mihova, T., Miranda, C., Mlenga, V., Morrow, J., Murphy, T., Naylor, J., Norman, C. Consensus quality: 161536 bases at least Q40
Consensus quality: 169887 bases at least Q30
Consensus quality: 174026 bases at least Q20
Estimated insert size: 175060; sum-of-contigs estimation
Quality coverage: 3.8x in Q20 bases; sum-of-contigs estimation
Quality coverage: 3.8x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length (see http://www.higsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

be preserved 44604 44704 76529 104571 104671 10238 120338 131095 132095 132095 132095 132095 132095 132095 44603: contig of 44603 bp in length 44703: gap of unknown length 76528: contig of 31825 bp in length 76528: gap of unknown length gap of contig gap of unknown length contig of 11657 bp in gap of unknown length contig of 10139 bp in contig of 27942 bp in gap of unknown length contig of 15567 bp in unknown length of 8845 bp in length unknown bp in length length length length length length

It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 by the finished sequence as soon as it is available and the accession number will be preserved.

1 133073: contig of 133073 bp in length
133074 133173: gap of 100 bp
133174 179813: contig of 46640 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    55481 a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Center project Information Center project name: L1766 Center clone name: 31_K_23

(1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Insert size: 189663; sum-of-contigs
Quality coverage: 10.7 in Q20 bases; agarose-fp
Quality coverage: 10.7 in Q20.
NOTE: This is a 'working draft' sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         be preserved

     The present sequence is one of a large number of 5' ESTs derived from mRNAS encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5', ends and can therefore be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequence of clones ci25_4 (AAV83132), da228_6 (AAV83133), du410_5 (AAV83134), eh80_1 (AAV83135), er359_1 (AAV83136), fh123_5 (AAV83137) fm60_1 (AAV83136) or fr473_2 (AAV83139), (all clones are deposited a ATCC 98415) and the proteins they encode are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals for example, tumour suppression/invasion activity, immune system boosting activity. The polynucleotides are also believed to be usefur for gene therapy. This polynucleotide was isolated from a human foetal brain cDNA library.

                        AAX10826 to AAX11093 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAV10602 and AAX11994 to AAX12260, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, activity, reproductive hormone regulating activity, reproductive hormone activity activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-JUN-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4460

```

The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the

interaction

between

the agent and

the NAM or the

product

                           The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences cDNA sequences they are of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used to obtain upstream regulatory sequences and to design environment and secretic correspondents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            determination of the disorder. The products and methods can be used in the disgnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

CC The present sequence is one of 3351 sequences in a library of human CC polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of CC the polynucleotide and for detection of transcription levels. Riboxymes CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as generic or biochemical markers (e.g. in CC carcinogenesis pathway and/or monitor the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC carcinogenesis pathway and/or monitor the efficacy of the efficacy of the carcinogenesis and compo

                                                                                                                                                                                                                                                                                             The present sequence is one of 3351 sequences in a library of human CC polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC creat the cancers and proliferative disorders such as neoplasia, CC dysplasia and hyperplasia.

cc sequence tags (sESTs), isolated from human, mouse, chicken and ratice tissue sources. The sESTs can have a range of activities depending on the tissues they were isolated from human, mouse, chicken and ratice the tissues they were isolated from the activities include: the tissues they were isolated from. The activities include: chemokinetic; analgesic; haemostatic; thrombolytic; antilifiammatory; cc chemokinetic; analgesic; haemostatic; thrombolytic; antilifiammatory; cc cytostatic; antiparkinsonian; antilucer; osteopathic; neuroprotective; cc antiasthmatic; vulnerary; antilucer; osteopathic; encurprotective; cc anticonvulsant; and antidepressant. The sESTs can be used for gene ct therapy and in vaccines. The sESTs are useful as probes for the collective; which correspond to the sESTs. Proteins encoded by the sESTs are useful in assays for determining biological activity and raising cantibodies. They may be useful for treatment of autoimmune disorders (authal), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, costeoporosis, osteoarthritis, central nervous system disorders (conditions costeoarthritis, bacterial, fungal or viral infections, depression and psoriasis. AAA45926 to AAA45931 represent inker variants which are given in the exemplification of the present invention.

The present invention describes colon tumour associated proteins (I) and (CC (I) and (II) can be used in joine through and vaccine production. (I) and (CC (II) may be used in the prevention, diagnosts and treatment of diseases (CC associated with inappropriate colon tumour associated protein (TCAP) (CC expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by (CC used to treat disorders associated with decreased expression by (CC excitifying mutations or deletions in a patient's genome that affect the cactivity of TCAPs by expressing inactive proteins or to supplement the CC patients own production of them. Additionally, (II) may be used to (CC eall culturing the cell to express the protein. (II) and its (CC complementary sequences may also be used as DNA probes in diagnostic (CC polymerase chain reaction (PCR) and hybridisation assays to detect and (CC quantitate the presence of similar nucleic acids in samples, and (CC anid in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies against TCAPs (CC and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used considered in samples (e.g. by engyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512

The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary trand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC coligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC coligonucleotide comprises a 1 least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers are useful for synthesising polynucleotides, or the primers are useful for synthesising polynucleotides, can be used in antisense therapy and CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC cDNAs easily without any specialised methods. AAH03166 to AAH1362B and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
portions of proteins which are associated with human colon tumours.

The invention also specifically discloses 8 human colon tumour proteins (AAB11897-B11904). The nucleic acids, the polypeptides they encode, and cantigen presenting cells (APCs, preferably dendritic cells) expressing such polypeptides may be used in vaccines that target tumour cells, cancer. T-cells specific for the polypeptide expressed by the APC are used to remove tumour cells from biological samples, especially blood or fractions thereof. The sample or the isolated T-cells specific for the polypeptide ean then be used to inhibit cancer development. CD4+ and/or CD8+ T-cells from a patient may be incubated with a polypeptide or nucleic acid of the invention, or an APC expressing such a polypeptide, to cause the proliferation of specific T-cells. The T-cells can be cloned and then administered back to the patient to inhibit cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              development. Nucleic acids encoding the polypeptides and antibodies against the polypeptides may be used to determine the expression level of a tumour protein of the invention, and therefore to determine whether cancer cells are present. Such diagnostic methods may also be used to monitor the progression of a cancer by repeating the processes at time intervals, and comparing the current result to previous results. The

ö

the polynucleotides (II) that encode them. (I) have cytostatic activity.

(I) and (II) can be used in gene therapy and vaccine production. (I) and associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host

Claim 25; Page 187; 472pp; English

present invention describes colon tumour associated proteins (I) and

The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be
                                                                                                                                                                                                                                                                                                                                                                                           King

(II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512 and AAM2494 to AAM24523 represent nucleotide and amino acid sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-JUL-2001
